Description

Since a few days, there are waves that we cannot access. I have tried to go to the groupspace and come back, to access them from the groupspace or inbox, to play in the groupspace a bit before trying, to log out and in, to refresh with CTRL+F5, to see other waves... Other waves can be seen perfectly but these ones no. It seems it is happening with long waves. Sometimes I do access to these problematic waves, I don't know why.

I have a copied two times errors that appeared. Once that I couldnt enter:

History

Ah, another issue:

- In the previous case when I open the wave (and an Error appears inmediatly)
- I see all its blips unread.
- All editions that I do are lost whenever I leave this wave
- If I come back to the same wave, now it works normally.

This last time when it worked that wave, I logged out and in, and only then I could open this wave (with the Error).

Should I copy this issue to WIAB also? With the Error traces? Or are they particular to Kune?
