Description

Sometimes, when someone adds a blip, I see the date "Jan 1, 1970". I'm not sure when does it happen. I have the feeling it happens when I'm seeing the blip being written by the other person... but when i go out of the wave and come back, the blip has the correct date. That is:

- Alice is writing a blip in a wave
- Bob opens the wave and sees Alice writing (letters in yellow background) in a blip. That blip has date "Jan 1, 1970"
- Alice finishes writing
- Bob opens another wave.
- Bob comes back to the previous wave, and now the blip of Alice shows the current time (that is, normal date/time).

History

#1 - 06/22/2012 10:38 AM - Vicente J. Ruiz Jurado

<https://issues.apache.org/jira/browse/WAVE-181>

"The cause is that the existing c/s protocol has no timestamp for document updates (but does for snapshots)."

I'll do a fast quick fix: "if date == 1970 then hide".

#2 - 08/03/2012 02:07 PM - Vicente J. Ruiz Jurado
