<p>Gadgets are really useful, I would like to access them through a simple way, like a place in a toolbar of the waves as one click button and some others gadgets in each blip toolbar.</p> <p>Exemple: (I don't have any technnical idea, sorry hackers) only a user perspective:</p> <p>Kune have a toolbar for waves and for each blip, I think the first one could be customizable for the users, and I imagine three possibles ways to do it:</p> <p>In inbox:</p> <ol style="list-style-type: none">0. The toolbar of each wave adds the most used gadget as a one click button in it. Maybe after two or three use. And in the future, the toolbar can remove some of them (one click button) that I don't use. (Some buttons leaving out the standard buttons)1. I customize my toolbar like I want and I add every button that I use.2. All alternatives <p>In group space:</p> <p>We have a way to access gadget trough a menu and sub menus, no buttons :(</p> <p>To blip toolbar: (in inbox and group space)</p> <ol style="list-style-type: none">0. Add a simple gadgets as "+1 , 0, -1" gadget as one click button in it, just together with buttons as "reply", "link this blip" and "detele". <p>what you think? Is this possible?</p> <p>Some "complex" gadgets would become in a only one click button to acces to it and customized in the wave, like now. Other "simple"gadgets as +1 would become in another tool in blip toolbar. I used "complex" and "simple" to try to explain me...</p>
