Description

In the generation of the semantic code of the old form (movecommons.org/preview), there is a bug. The code with respect to the keywords looks something like this:

<div about="#bienes comunes" typeof="skos:Concept"/><div about="# procomún" typeof="skos:Concept"/><div about="# herramientas" typeof="skos:Concept"/>

The first keyword is fine, but the rest look "# keyword" instead of "#keyword".

As this concerns to the old form, it is not expected to be corrected. I'm including it just to take care in the new form.
