<b>Resolution:</b>			
<b>Description</b>			
Emails in invitations are accepted in client side when separated with spaces, so you get an Oops from the server side.

Revision 6754480a - 12/09/2013 06:42 PM - Vicente J. Ruiz Jurado

Fix for #543 (allow spaces and other separators in invitations)

#### History

#1 - 05/27/2013 03:52 PM - Robb Ebright

Would it be possible to add some validation that simply attempts to validate e-mails based upon spaces & carriage returns on the server side in addition to CSV. This would be best from a UI perspective. From the example I didn't notice that there were comas after the e-mails and only saw the carriage returns. In an ideal world the software would be smart enough to anticipate what the users intended and accomodate.
